

# Untreated Decay, Inequities Increase in Children's Oral Health

Tooth decay is the most common chronic disease among kids.

**2 in 3**

**third graders in Washington have experienced tooth decay.**

More than 1 in 5 have rampant decay (7+ teeth). For children from low income households, that increases to 1 in 3 children.

Children do better in school when they're cavity free.

But progress in cavity prevention has declined according to the 2023-2024 Washington State Smile Survey.

**1 in 5**

**third graders have untreated cavities.**

**12%** 2015-16

**19%** 2023-24

% 3<sup>rd</sup> graders with untreated cavities

**Data shows increasing untreated decay and widening disparities across groups**, with children of color experiencing more untreated decay.

**Too many children are in pain.**  
And oral pain is disrupting learning.

**Over 3,000**

**second and third graders** may be sitting in class each day with oral pain.

Those students would fill

**42 buses.**

**For children, severe cavities can cause:**

- ✗ Chronic pain and infection
- ✗ Difficulty speaking, eating, and learning
- ✗ Self-esteem issues

**\$20  
return  
for every \$1  
invested in  
prevention,**

like dental sealants and fluoridated water.

Source: CDC 2022

**Prevention is key.**

Dental sealants prevent cavities, but too many kids are still missing out.

Nearly half of 3<sup>rd</sup> graders (48%) had protective sealants in 2024, which is **higher than the national average** of 32% for 8 year old children.

WA  
**48%**

US  
**32%**

% 3<sup>rd</sup> graders with dental sealants

**Equity data tells an even starker story.**

**Children in 2<sup>nd</sup> and 3<sup>rd</sup> grade experiencing homelessness** face the highest burden of oral disease.

**3 in 4** have tooth decay and 1 in 4 has untreated cavities.

2<sup>nd</sup> and 3<sup>rd</sup> graders from low-income households are **more than twice as likely to suffer from rampant tooth decay** compared to higher income peers.

**32%** of low-income 2<sup>nd</sup> and 3<sup>rd</sup> graders

**14%** not low-income

% 3<sup>rd</sup> graders with rampant tooth decay by free and reduced lunch qualification

**Untreated decay has increased across all race/ethnicity groups since 2016**, with children of color more likely to have untreated decay.

Percent of 2<sup>nd</sup> and 3<sup>rd</sup> graders with untreated decay between the 2016 and 2024 Smile Surveys

Cavities carry a steep cost **each year** in the United States:

**\$2 billion** in ER visits

### What can we do?

Encourage **prevention** efforts.

**Expand access to dental care**, especially for children with the greatest needs.

Further **expand collaborations at the community and statewide levels** to advance policies and programs to improve children's oral health, access to care and reduce inequities.

**Healthy Mouths, Healthy Minds.**

Every child should learn pain free.
