

**Washington Smile Survey, 2022-2023**  
*Evaluating the Oral Health of 2<sup>nd</sup> and 3<sup>rd</sup> Grade Children*

# Introductions

# Introductions

Name

Where you live

Where you went to professional school

Your non-work passion

# Your Trainer – Dr. Kathy Phipps

BSDH – Dental Hygiene

BS – General Science  
Public Health Studies

# Go Blue!

MPH – Dental Public Health

DrPH – Oral Epidemiology

# Employment

- 1988-2000: Oregon Health & Sciences University
  - School of Dentistry & School of Medicine
- 2000-present: Consultant
  - Association of State and Territorial Dental Directors
  - Los Angeles County
  - State of West Virginia
  - Indian Health Service
  - Arcora Foundation

# Morro Bay, CA

# My Passions - *Travel*

# **My Passions**

## *Wildlife Photography*

# Training Objectives

- Participants will be able to describe
  - Washington Smile Survey
  - Oral health surveillance
  - The importance of “diagnostic” consistency
  - The diagnostic criteria for the oral health survey

# Purpose of Smile Survey

- Primary: To obtain *statewide* estimates of the oral health of WA's children
  - To evaluate and document oral health disparities by...
    - Socioeconomic status
    - Race/ethnicity
- Secondary: To obtain *county* level estimates for some, but not all, of Washington's counties
  - 21 counties will participate

# A Brief History of the Smile Survey

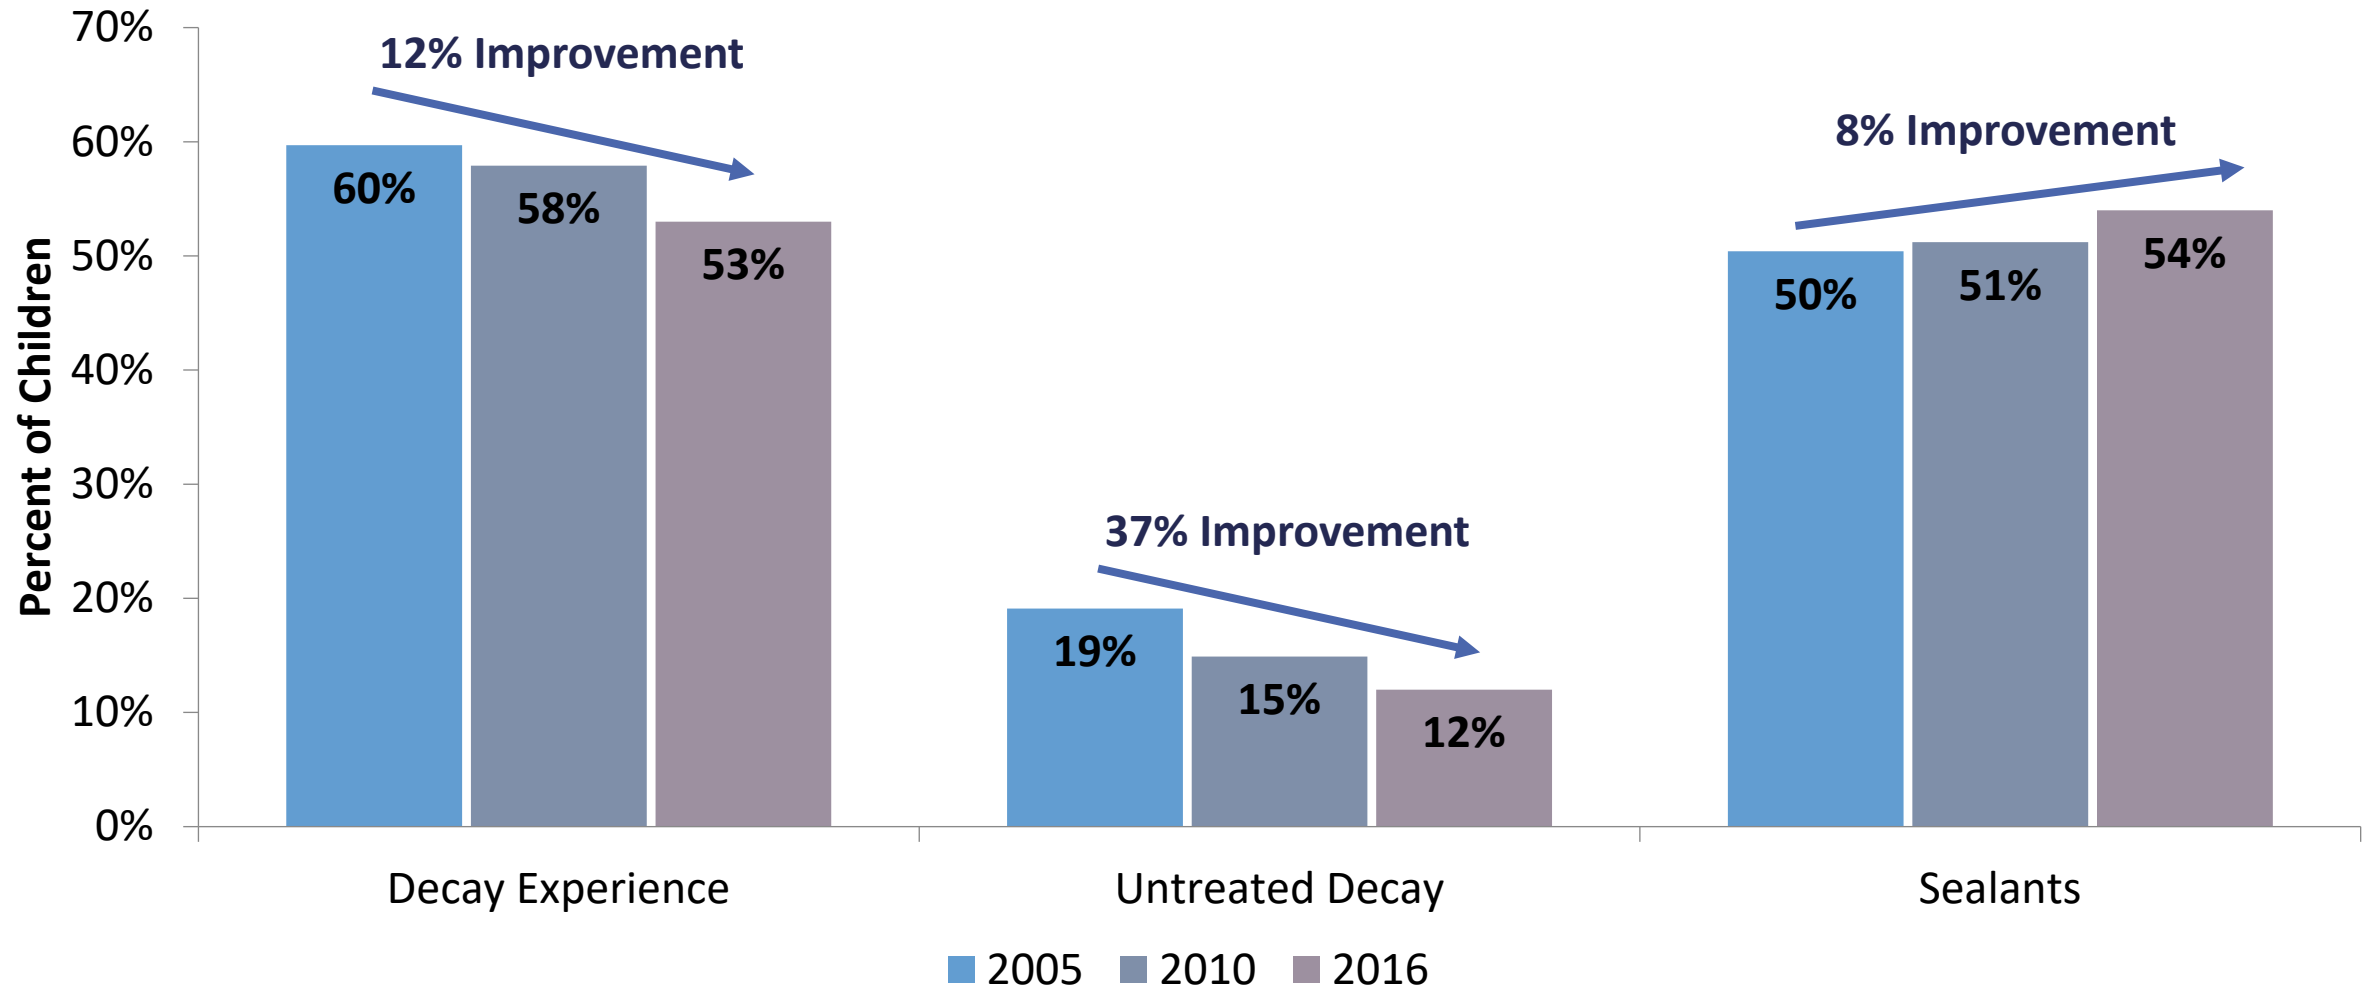

- 1993-1994
- 1999-2000
- 2004-2005
- 2009-2010
- 2015-2016
- 2022-2023

**Happy 29<sup>th</sup> Birthday!**

# Third Graders – Trends Over Time

# Who Will We Screen?

- Public elementary school children
  - 2<sup>nd</sup> Grade
  - 3<sup>rd</sup> Grade

# State Smile Survey Sample

## Probability sample of public schools

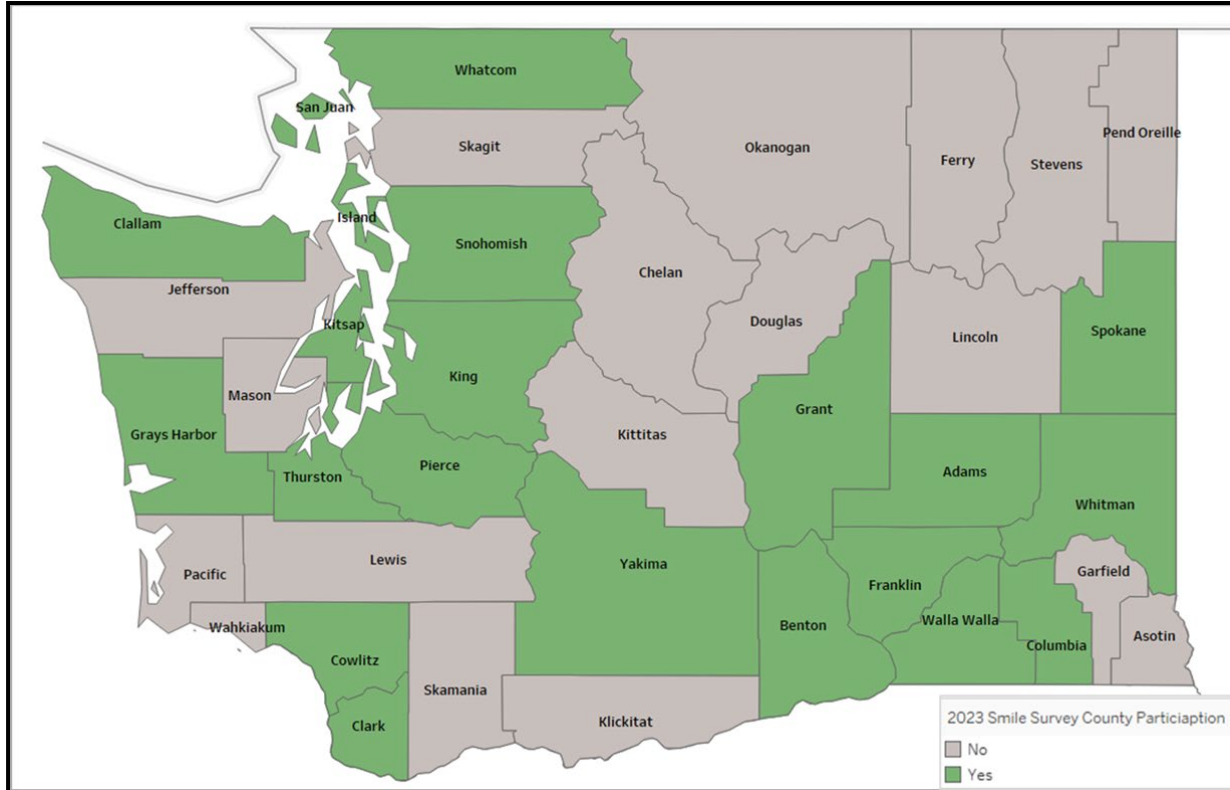

- Stratified by
  - Geographic region
  - Free/reduced price meal status
- Representative of state

## State Sample 87 schools

- 79 schools – Both grades
- 4 schools – 2<sup>nd</sup> grade only
- 4 schools – 3<sup>rd</sup> grade only

# County-Level Smile Survey Sample

- 21 counties (green on map)
- 285 public schools
- Western WA
  - Clallam, Grays Harbor, Island, King, Kitsap, Pierce, San Juan, Snohomish, Thurston & Whatcom
- Southwest WA
  - Clark & Cowlitz
- Central WA
  - Benton, Grant, & Yakima
- Eastern WA
  - Adams, Columbia, Franklin, Spokane, Walla Walla, & Whitman

# Primary Oral Health Indicators

## Collected during screening

- Treated decay (none, primary only, primary & permanent, permanent only)
- Untreated decay (none, primary only, primary & permanent, permanent only)
- Rampant decay – 7 or more affected teeth (no/yes)
- Dental sealants on permanent molars – (no/yes)
- Need for restorative dental care – (none, early, urgent)

## Calculated after the screening

- Decay experience - calculated from treated & untreated decay

# Demographic Indicators

- State Student ID Number
  - Data will be merged with OSPI dataset to obtain demographic indicators
  - ***Accuracy is essential***

# Screener Training

# Why Are We Having This Training?

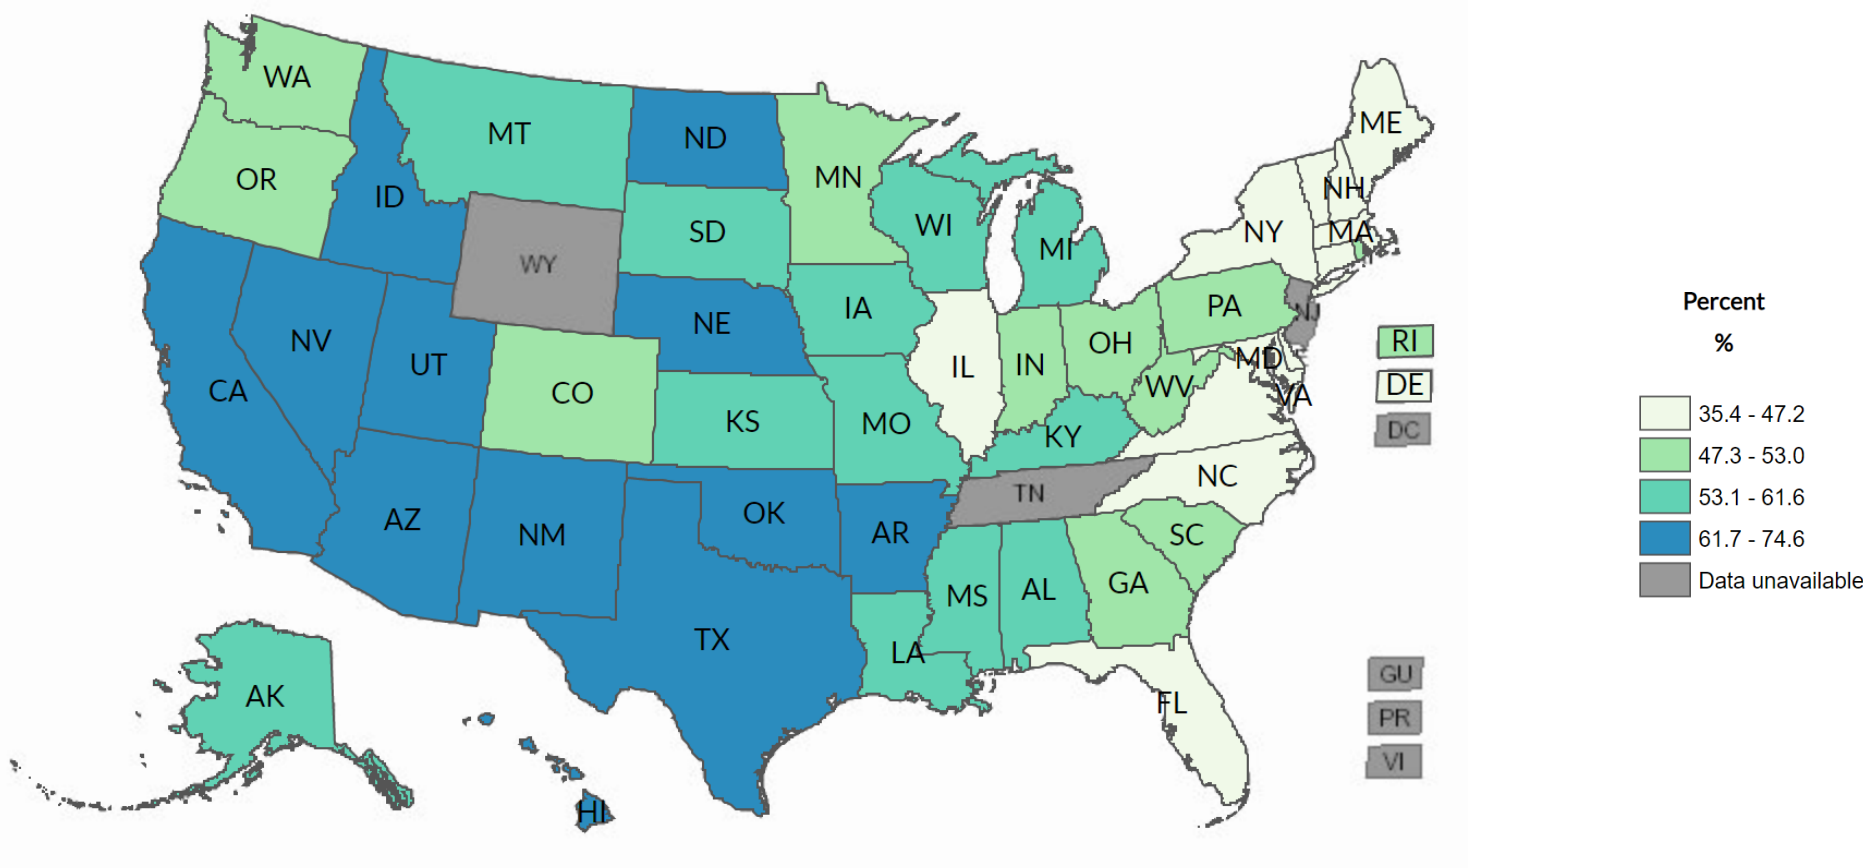

Caries diagnosis varies among clinicians

- 10 clinicians plus 1 patient = 10 different treatment plans

Purpose of training is to assure consistency

# Consistency with Other States

Percentage of 3<sup>rd</sup> Grade Children with Decay Experience

# Consistency Versus Perfection

## CONSISTENCY

Consistency  
is the key to  
success.

## PERFECTION

A beautiful  
thing is never  
perfect.

# Consistency NOT Perfection

## CONSISTENCY

- Are you diabetic?
- How much do you weigh?
- Have you broken a bone?
- Dental screening by trained screeners with defined criteria

## PERFECTION

- Blood test
- Weight on calibrated scale
- Medical record review
- Complete examination with x-rays by trained & calibrated examiners

# Consistency Versus Perfection

Variation between dentists in recording the number of decayed and filled teeth in a group of 12 year old children

# Importance of Consistency

- With multiple screeners, it is essential that everyone screen children in the same manner
- Set criteria are used
  - Everyone must follow the criteria
  - Will underestimate disease
  - Used in all state and national surveys

Example Adult Obesity

# Obesity Among US Adults, 1990

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# Obesity Among US Adults, 1992

Legend for Obesity Prevalence:

- No Data
- <10%
- 10%–14%
- 15%–19%
- 20%–24%
- 25%–29%
- ≥30%

# Obesity Among US Adults, 1994

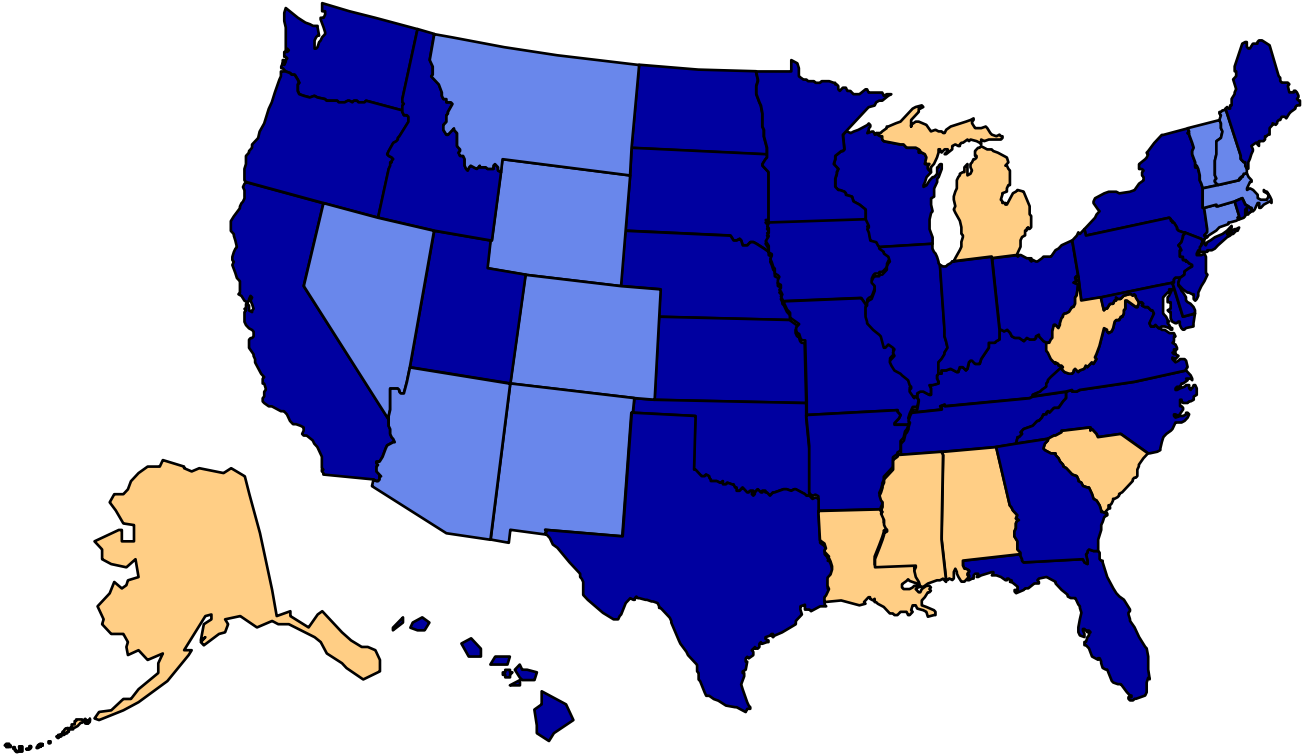

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# Obesity Among US Adults, 1996

No Data <10% 10%-14% 15%-19% 20%-24% 25%-29% ≥30%

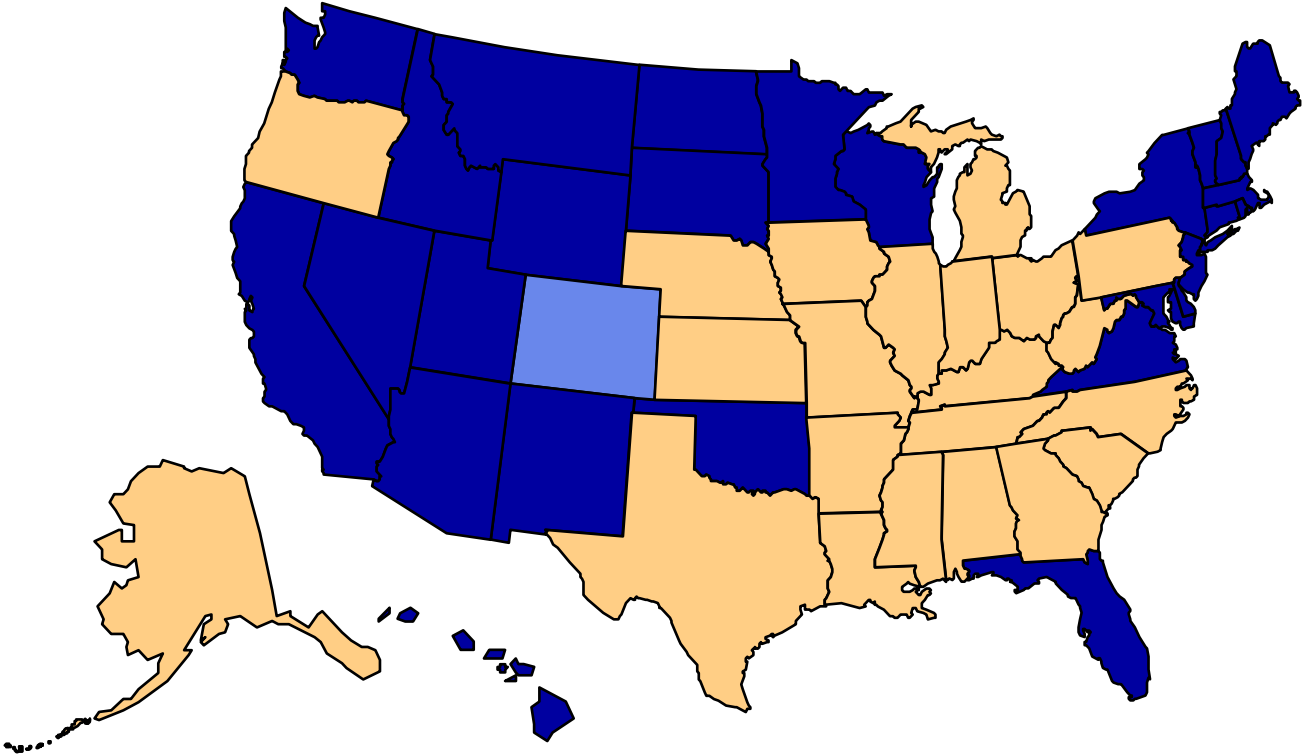

# Obesity Among US Adults, 1998

Legend: No Data, <10%, 10%-14%, 15%-19%, 20%-24%, 25%-29%, ≥30%

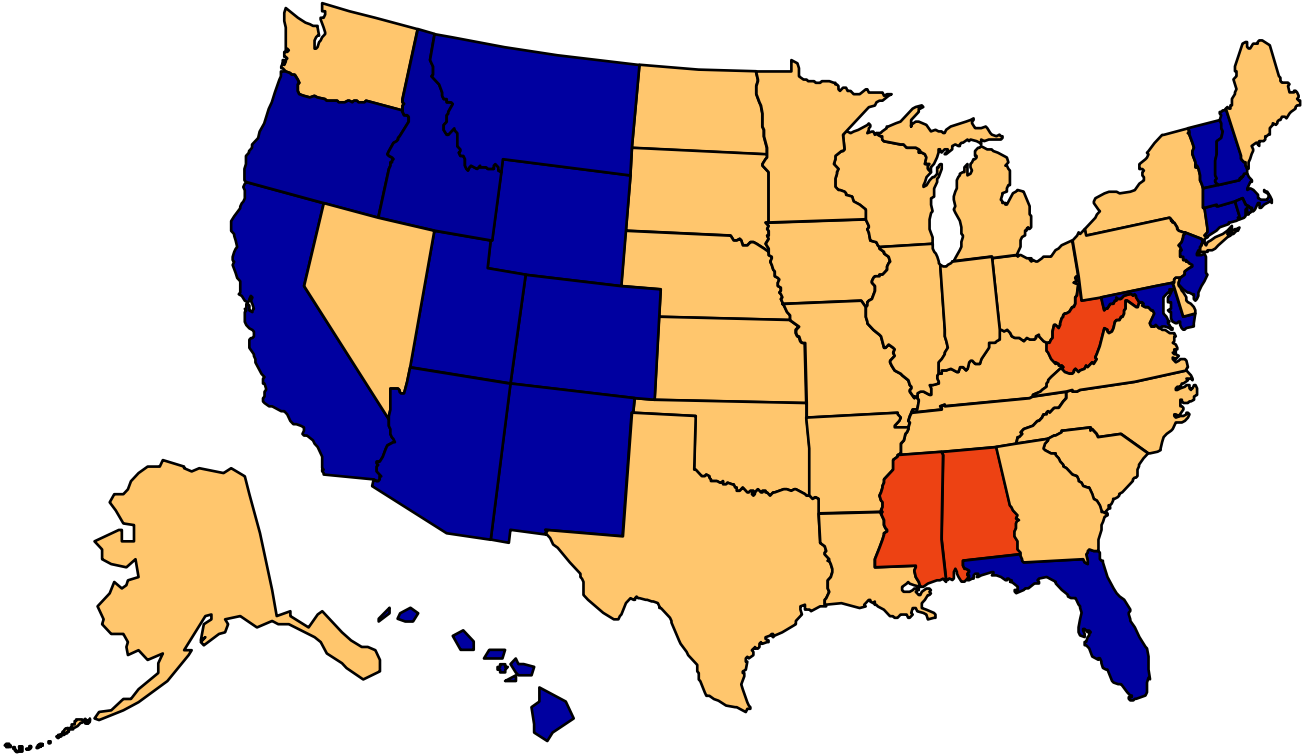

# Obesity Among US Adults, 2000

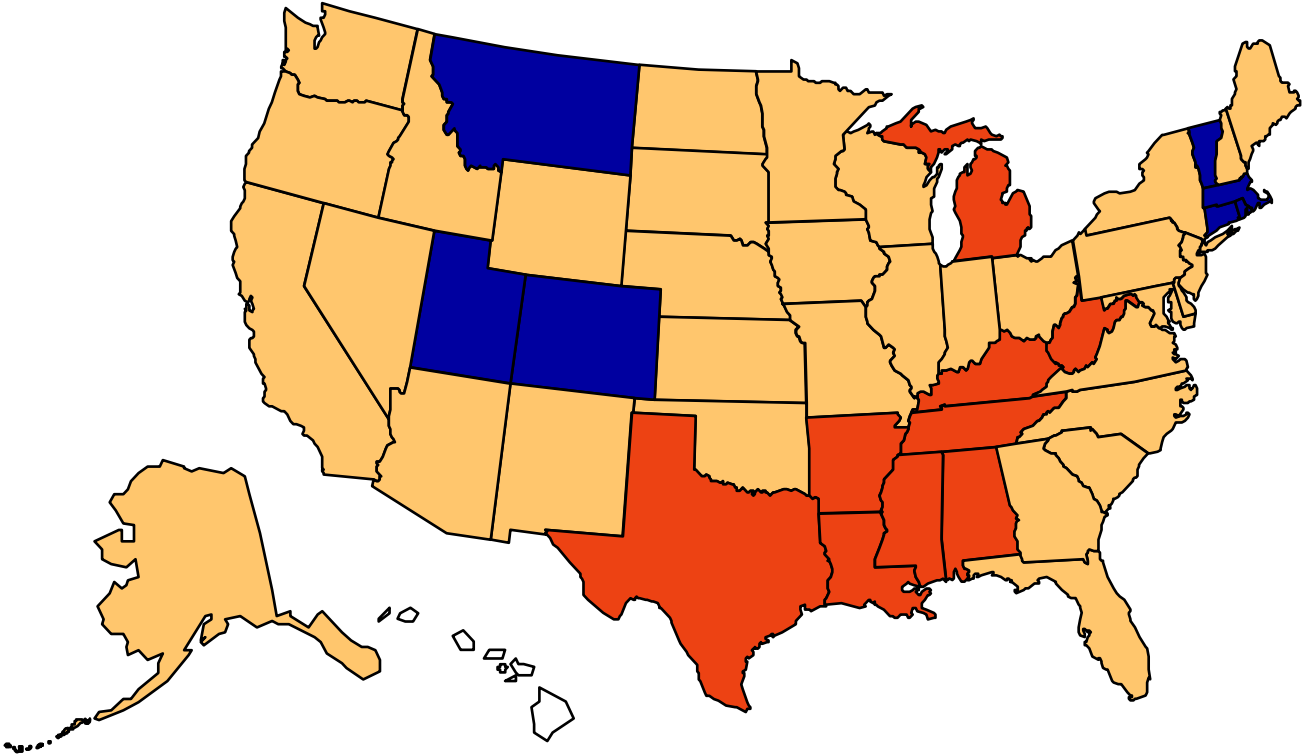

No Data <10% 10%–14% 15%–19% 20%–24% 25%–29% ≥30%

# Obesity Among US Adults, 2002

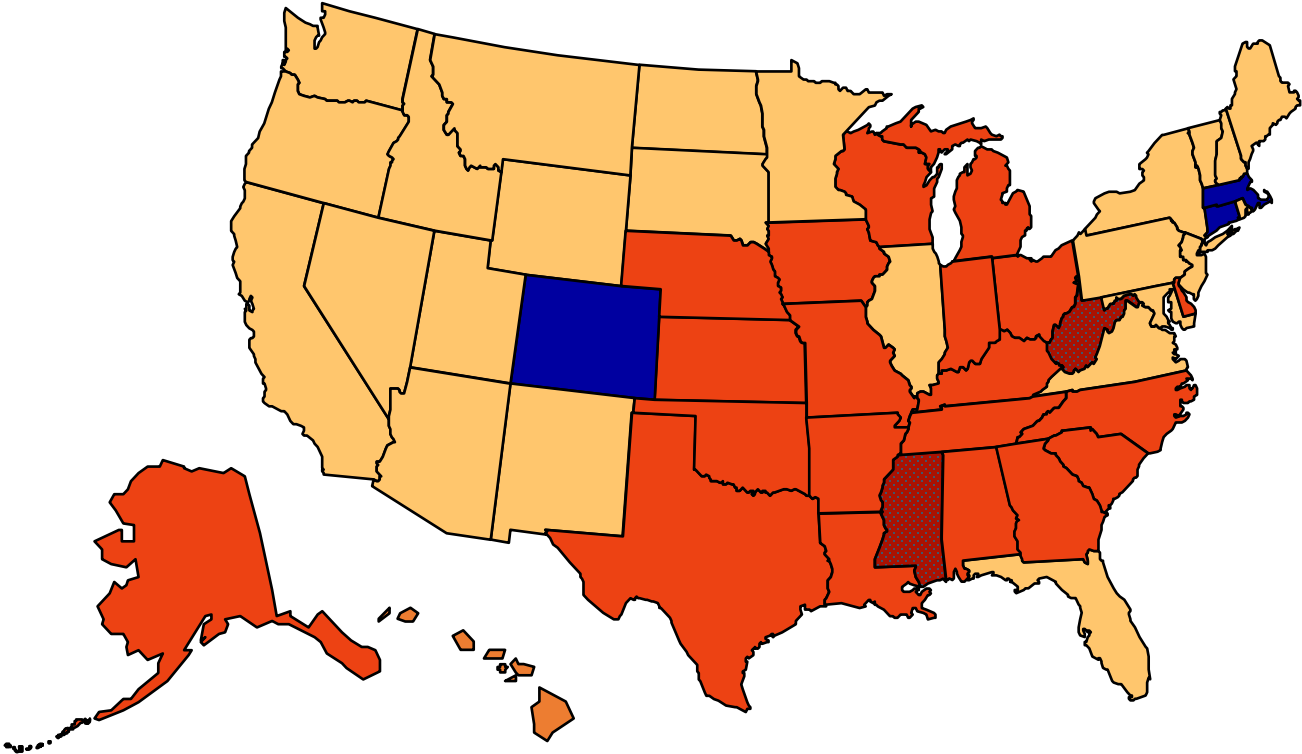

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# Obesity Among US Adults, 2004

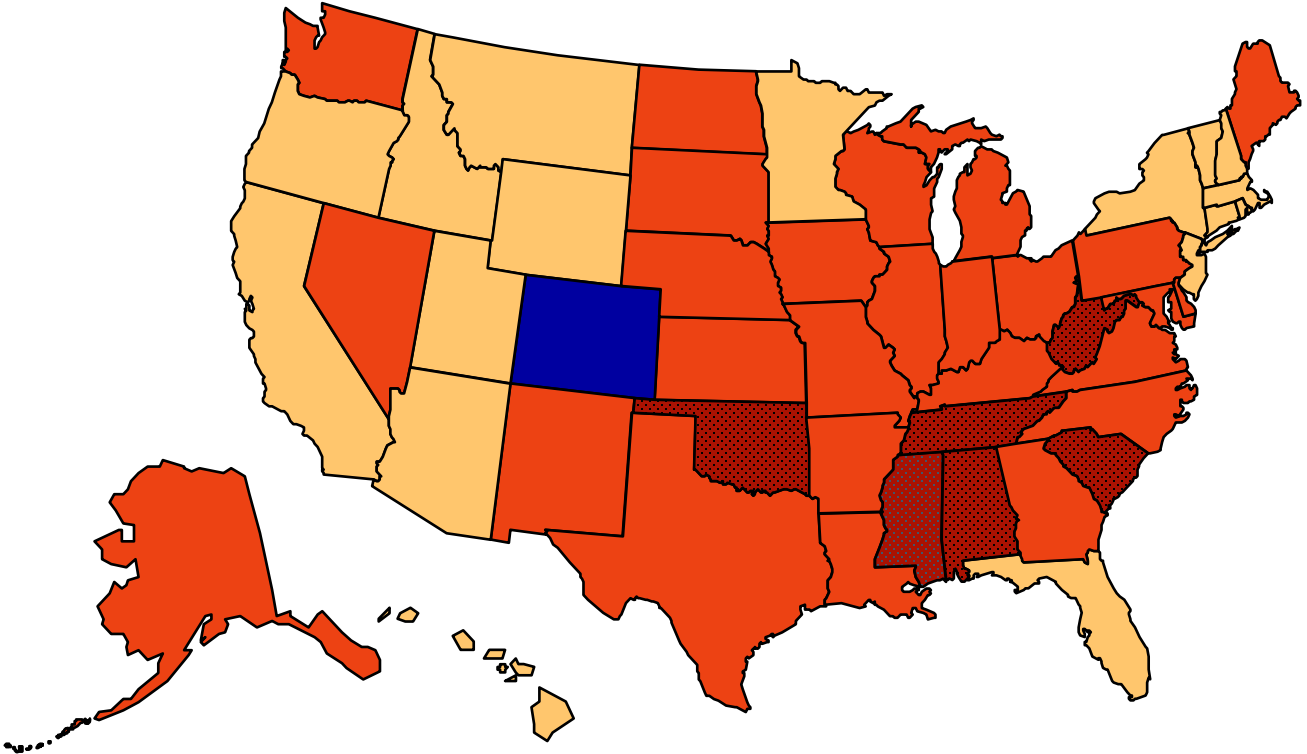

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# Obesity Among US Adults, 2006

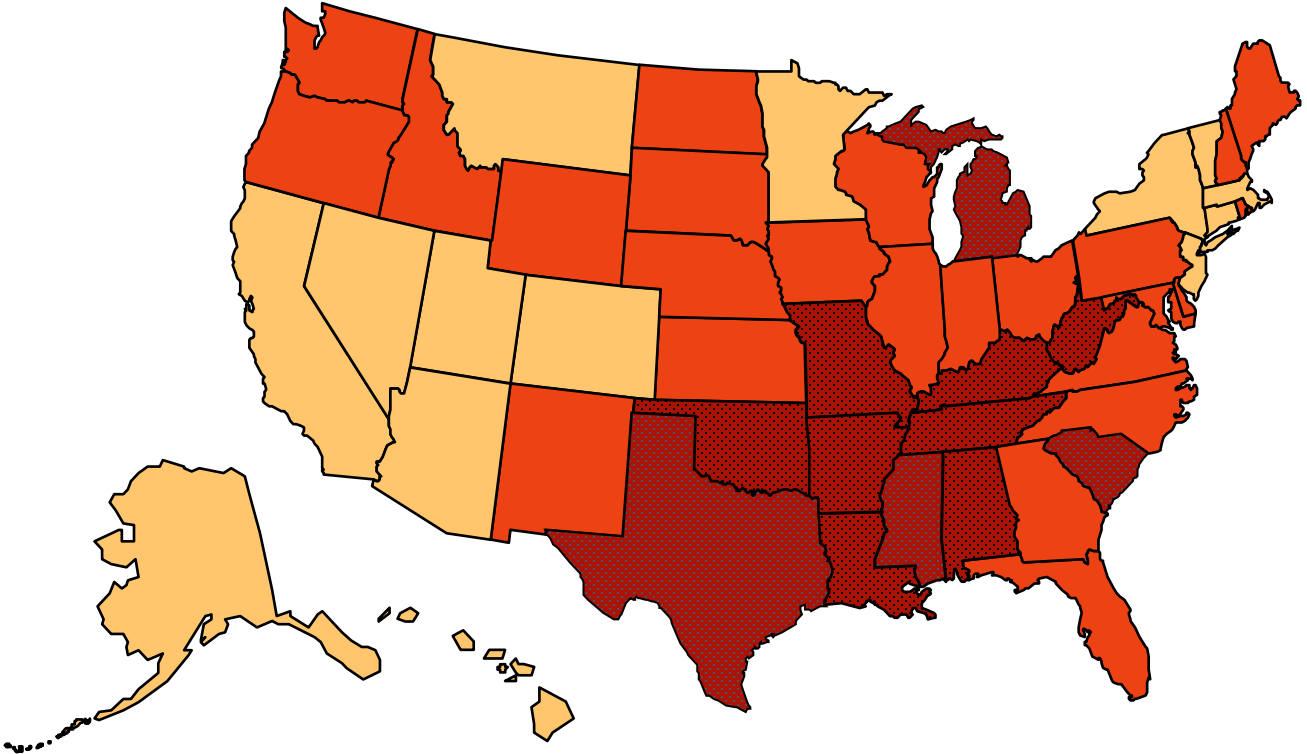

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# Obesity Among US Adults, 2008

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# Obesity Among US Adults, 2010

Legend: No Data, <10%, 10%–14%, 15%–19%, 20%–24%, 25%–29%, ≥30%

# How is Obesity Data Collected?

---

# Screening Logistics

# What is a Dental Screening?

**NOT** a clinical examination with diagnosis and treatment planning

Quick screening with recording of *obvious* findings

***About 1 minute per child***

# Good Lighting is Essential

**NEVER RELY ON NATURAL LIGHT.**

# Lighting Options

Strong penlight (LED lights are good)

Small flashlight

Portable dental light (if available)

Always carry extra batteries

**DO NOT use cell phone flashlight**

# Teeth Should be Clean & Dry

May need to remove gross debris with

- Toothbrush
- Long-handled toothpick or cotton swab
- Only when absolutely necessary

Saliva

- Ask child to swallow

# Retraction & Visualization

Tongue Blades

Disposable Mirrors

# Instrumentation

- Dental explorers will NOT be used

# Damaged Enamel From Explorer

# What About My Loupes?

DO NOT USE

# Infection Control Guidelines

# Considerations

## Resources

Centers for Disease Control & Prevention  
[www.cdc.gov/oralhealth/infectioncontrol/index.html](http://www.cdc.gov/oralhealth/infectioncontrol/index.html)

Occupational Safety & Health Administration  
[www.osha.gov/coronavirus/control-prevention/dentistry](http://www.osha.gov/coronavirus/control-prevention/dentistry)

The BSS is a non-invasive screening – no physical contact with child

The BSS *does not* produce aerosols

Follow infection control guidelines for non-aerosol generating procedures

# PPE in the Era of COVID

## Gloves

- Change between each child

## Surgical mask

- High community transmission, N95 is advisable

## Eye protection (optional)

- Goggles or face shield

## Work clothing

- Scrubs, lab coat, smock, or gown

# Common Infection Control Mistakes

**Touching the Child**

**Flashlight in Mouth**

# What About Parental Consent?

**PARENTAL CONSENT**

meaning, definition, explanation...

# Type of Consent May Vary by School

## Passive “Opt-Out” Consent

- All children are screened unless parent says “No”
- If a child doesn’t return a form, they are screened

## Positive Consent

- Only children that return a form with a “Yes” are screened

# Parental Consent

- When obtaining school approval, offer opt-out consent
- Benefits of opt-out...
  - Less work for school staff
  - The highest-risk children are least likely to return a consent form so they will get a dental screening if opt-out is used
  - The screening is non-invasive (like a vision screening)
- Only offer positive consent if school refuses opt-out

# Oral Health Indicators

- *Treated Decay*
- *Untreated Decay*
- *Rampant Decay*
- *Dental Sealants*
- *Need for Restorative Dental Care*

**Treated Decay**

# Treated Decay – Past Treatment

- Has the child had dental treatment *because of decay?*
- Includes
  - Amalgam and composite restorations
  - Glass ionomer restorations
  - Preventive resin restorations
  - Temporary restorations
  - Crowns placed because of decay
  - Extractions because of decay
    - Usually, primary molars

# Treated Decay

- Glass ionomer & preventive resin restorations are treated decay

# Treated Decay

- Teeth with temporary fillings are classified as treated

→ Treated

# Treated Decay

- If a filling has fallen out and decay is not present, code as treated

Treated

# Treated Decay – Extracted Teeth

- Has a tooth been extracted because of decay?
  - **DO NOT** include teeth extracted for orthodontic reasons
  - **DO NOT** include teeth that have exfoliated naturally

# **BEWARE: Some Restorations Are Hard to Identify**

# Tooth Colored Crowns

# Potential Tool for Identifying Composite/GI Restorations

# Black Light Example

# NOT Treated Decay

- Crowns placed *because of trauma* are not treated decay

←→ Not Treated Decay

# Traditional Sealants are NOT Treated Decay

Treated = No

# Codes for Treated Decay

No treated decay

Primary teeth only

Primary & permanent teeth

Permanent teeth only

**Untreated Decay**

## Untreated Decay

A measure of  
untreated  
disease

Does this  
child have any  
CAVITIES that  
have not  
been treated?

# Untreated Decay

- A tooth has untreated decay when you can easily see breakdown of the enamel surface
- *Only cavitated lesions are considered untreated decay*

# Untreated Decay

- Reference – detectable using PSR/CPI perio probe
- If you gently moved a hypothetical PSR/CPI perio probe over a lesion, the probe would “catch” a cavitated lesion

# Untreated Decay

**Pits & Fissures**

**Smooth Surface**

# Untreated Decay

- Teeth treated with SDF are coded as untreated decay if there is a break in the enamel surface

# Untreated Decay

# Untreated Decay

- Retained roots & root fragments = untreated decay

← Untreated decay →

# Road Analogy

Definitive Hole in Road Surface  
Untreated Decay

Road Surface Intact  
NOT Untreated Decay

# Proximal Surface Decay

# NOT Untreated Decay

- Broken fillings without recurrent decay are coded as treated not untreated decay

Treated Decay

# NOT Untreated Decay

- Teeth with stained pits & fissures and NO enamel break are considered sound

This tooth has stain but NO enamel break, so it is SOUND.

# NOT Untreated Decay

- “White spot” lesions are not untreated decay

These teeth have “white spots” but no break in the enamel surface. Do not code as untreated decay.

# Rule of Thumb

*When in doubt, rule it out.*

**If you are not sure if a cavity  
is present, assume it is not.**

# Codes for Untreated Decay

No untreated decay

Primary teeth only

Primary & permanent teeth

Permanent teeth only

# A Few Examples

Untreated Decay = No

Untreated Decay = Yes

UniViSS (2008)

Universal Visual Scoring System for pits and fissures (UniViSS occlusal)						
Second step: Discoloration Assessment	First Step: Lesion Detection & Severity Assessment					
	First visible signs of a caries lesion	Established caries lesion	Microcavity and/or localised enamel breakdown	Dentin exposure	Large cavity	Pulp exposure
	Score F	Score E	Score M	Score D	Score L	Score P
Sound surface (Score 0)	No cavitations or discolorations are detectable.					
White (Score 1)						
White-brown (Score 2)						
(Dark) Brown (Score 3)						
Greyish translucency (Score 4)	X				X	X

# White Discoloration

Not visible without  
prolonged air drying  
**Untreated decay = NO**

May be visible without  
drying, fissures appear  
wider but no “break” in  
enamel integrity  
**Untreated decay = NO**

Has definitive break in  
enamel surface  
**Untreated decay = YES**

# White-Brown Discoloration

Not visible without  
prolonged air drying  
**Untreated decay = NO**

Visible without drying,  
fissures appear dark &  
wider but no “break” in  
enamel integrity  
**Untreated decay = NO**

Has definitive break in  
enamel surface  
**Untreated decay = YES**

# Dark Brown Discoloration

Visible without air  
drying, stain

Untreated decay = NO

Visible without air  
drying, stain

Untreated decay = NO

Has definitive break in  
enamel surface

Untreated decay = YES

**Rampant Decay**

# Rampant Decay

- Does the child have **7 or more teeth** with untreated or treated decay?

8 teeth with treated decay  
Rampant Decay = Yes

11 teeth with untreated decay  
Rampant Decay = Yes

8 teeth with treated decay  
Rampant Decay = Yes

11 teeth with untreated decay  
Rampant Decay = Yes

1 tooth with treated decay  
Rampant Decay = No

# Rampant Decay

7+ teeth with untreated decay  
Rampant Decay = Yes

# Codes for Rampant Decay

No = 0-6 teeth with treated or untreated decay

Yes = 7+ teeth with treated or untreated decay

DENTAL  
SEALANTS  
**PERMANENT  
MOLARS**

# Dental Sealants

- Permanent molars only
- DO NOT include primary molars or sealants on non-molar teeth
- Can use toothpick to lightly “feel” occlusal surface for sealants

Transparent

Opaque

Glass Ionomer

# Dental Sealants

- Include both partially and fully retained sealants

Partially Retained  
Sealant

Fully Retained  
Sealant

# Is it a PRR or a Dental Sealant?

- It can be difficult to determine if a tooth has a preventive resin restoration (PRR) or a sealant
- If you see a definitive cavity preparation, code the tooth as having treated decay. A PRR is treated decay.

Preventive Resin Restorations  
**Treated Decay = Yes**

# Is it a PRR or a Dental Sealant?

- Can you see evidence of a prep?
  - If yes – PRR = treated decay
  - If no – sealant

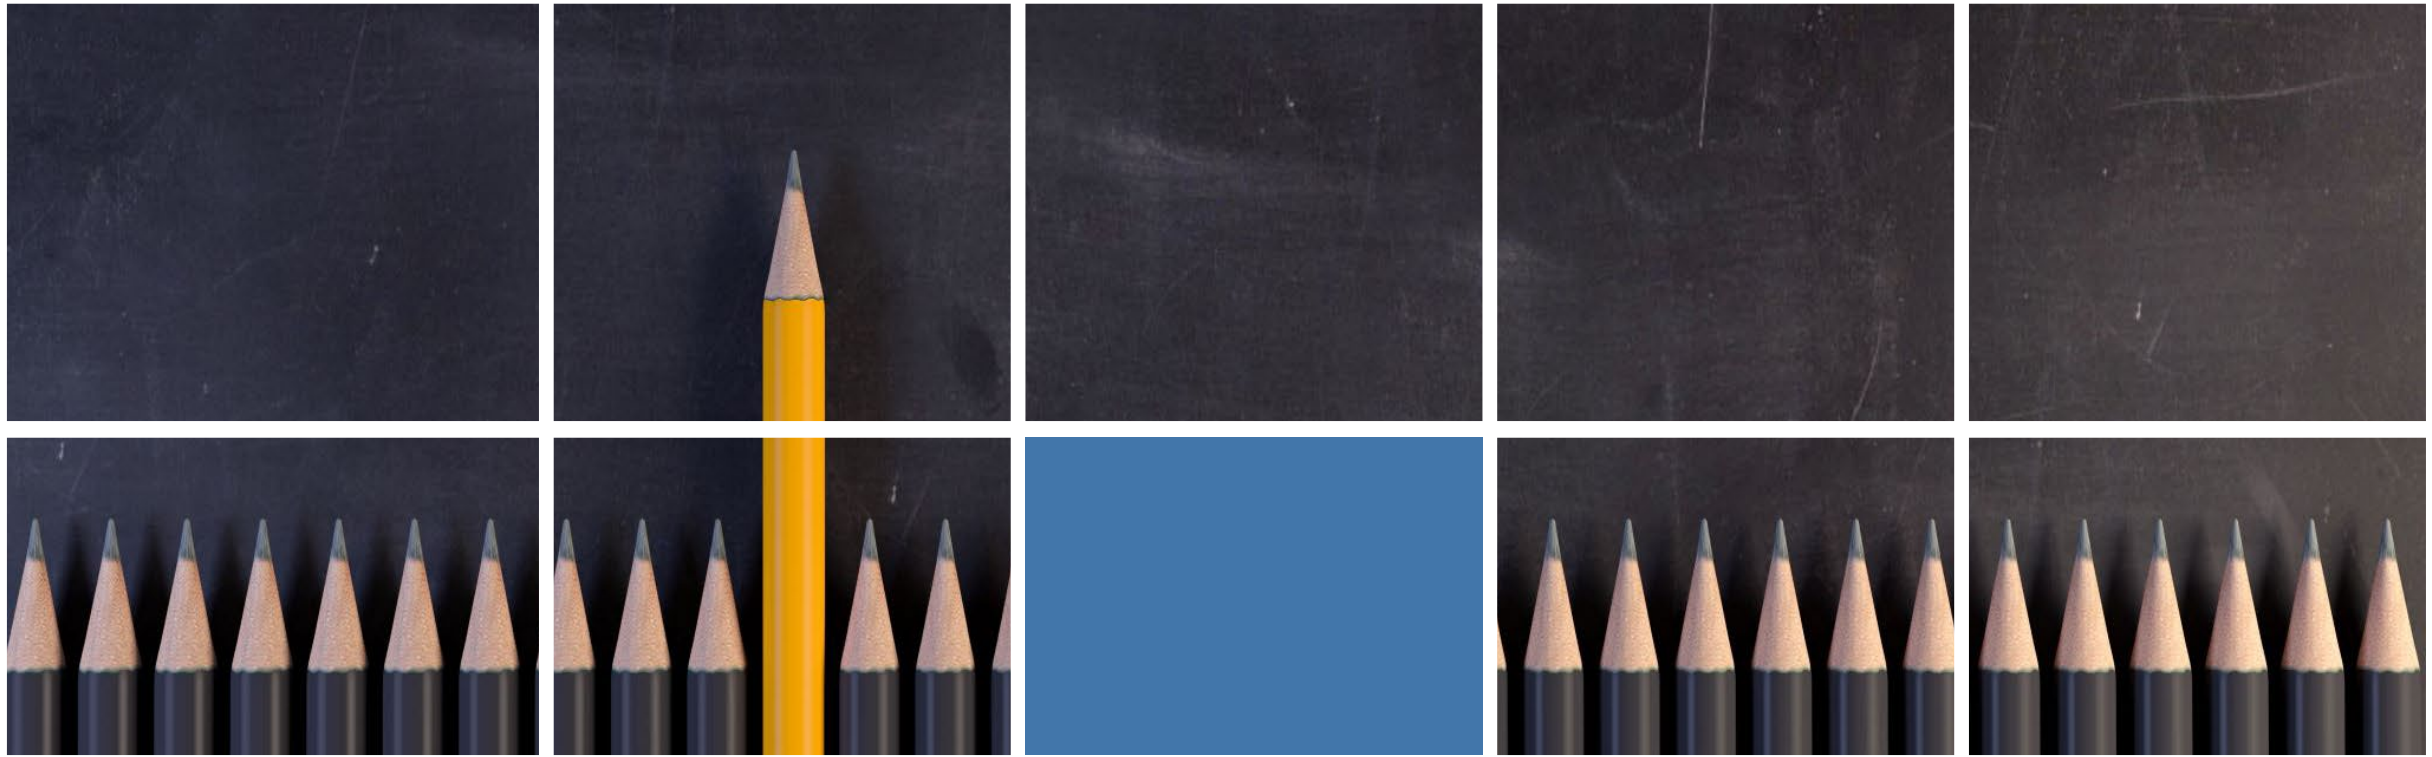

**Treated Decay = Yes**  
**Sealant = No**

# Codes for Dental Sealants

No = no sealants on permanent molars

- Includes children with no permanent molars

Yes = sealants on 1+ permanent molars

# Special Circumstances

# Congenitally Missing Teeth

Ignore congenitally missing teeth

# Natural Exfoliation

Treated = No

# Teeth Extracted for Ortho Reasons

- Teeth extracted for orthodontics are not treated decay

This person has missing premolars because of orthodontics so they do NOT have treated decay.

**Treated Decay = No**

# Injured Teeth

- Do not count teeth that are injured or treated because of injury

Untreated = No  
Treated = No

Untreated = No  
Treated = No

# Fused Teeth

**Ignore fact that teeth are fused.**

# Include Supernumerary Teeth

**Untreated = No**  
**Treated = No**

**Untreated = Yes**  
**Treated = No**

# Developmental Defects of the Enamel

Opaque Defect  
Untreated = No

Pitted Defect  
Untreated = No

# Generalized Lack of Enamel

**7-year-old**  
Untreated decay = No

# Pitted Enamel Defect

**8-year-old**  
Untreated Decay = No

# Molar-Incisor Hypomineralization

# Enamel Defects & Decay

Untreated Decay = Yes

# Enamel Defects & Decay

Linear defect  
Untreated Decay = No

Linear defect plus decay  
Untreated Decay = Yes

# Enamel Defects & Decay

NEED FOR  
DENTAL  
CARE  
(FOLLOW-UP CARE)

# Need for Dental Care (Treatment Urgency)

- 3 levels based on how soon a child should visit the dentist for a clinical diagnosis and any necessary *restorative dental care*
  - Urgent need
  - Early care needed
  - No obvious problem (No)

# Need for Dental Care (Treatment Urgency)

- Urgent need
  - Needs dental care within the next week because of signs or symptoms that include *pain, infection, or swelling*
  - A child with an abscess should always be coded as urgent
    - Even if the abscess is draining

# Need for Dental Care (Treatment Urgency)

This person has an abscess, so they need URGENT care

# Need for Dental Care (Treatment Urgency)

This child has a draining abscess and should be coded as URGENT care

# Need for Dental Care (Treatment Urgency)

- Early dental care
  - Needs to see a dentist because of untreated decay or broken restorations but they do not have pain or an infection
  - Should see a dentist within the next several weeks or before their next regularly scheduled dental appointment
  - ***DO NOT INCLUDE CHILDREN NEEDING ONLY A CLEANING OR SEALANTS***

# Need for Dental Care (Treatment Urgency)

This child needs EARLY dental care

# Need for Dental Care (Treatment Urgency)

- No obvious problems
  - Children with no cavitated decay or other dental problems requiring early attention are considered to have no obvious problem, which means that they should receive routine dental checkups
  - Decay only on primary teeth about to be exfoliated
    - Child can have decayed teeth but not need treatment
  - *Children needing only a prophylaxis or another preventive service should be coded as having no obvious problems*

# Need for Dental Care (Treatment Urgency)

This child has no obvious need for dental care

# Need for Dental Care (Treatment Urgency)

This child has no obvious need for dental care

# Codes for Need for Dental Care

No (0) = no obvious need for care

Early (1) = needs early dental care

Urgent (2) = needs urgent dental care

# Examples

# Example

**Treated** = Primary only  
**Untreated** = Primary only  
**Rampant** = No (6 teeth)  
**Sealants** = No  
**Urgency** = Early

# Example

**Treated** = Primary only  
**Untreated** = No  
**Rampant** = No (4 teeth)  
**Sealants** = No  
**Urgency** = No

# Example

**Treated** = Primary only

**Untreated** = No

**Rampant** = No (2 teeth)

**Sealants** = No

**Urgency** = No

# Example

**Treated = No**  
**Untreated = Primary & permanent**  
**Rampant = No (4 teeth)**  
**Sealants = No**  
**Urgency = Depends**

# Example

Treated = No  
Untreated = No  
Rampant = No  
Sealants = Yes  
Urgency = No

*Do not count dental sealants as treated*

# Example

Treated = Primary only  
Untreated = No  
Rampant = Yes (14 teeth)  
Sealants = No  
Urgency = No

# Example

Treated = No  
Untreated = Permanent only  
Rampant = No  
Sealants = No  
Urgency = Depends

# Example

Untreated = Permanent only

Sealants = Yes

Treated = Permanent only

# Example

**Treated** = Permanent only  
**Untreated** = Permanent only  
**Rampant** = No (5 or 6 teeth)  
**Sealants** = No  
**Urgency** = Depends

# Example

Treated = No  
Untreated = No  
Rampant = No  
Sealants = Yes  
Urgency = No

# Example

Enamel Defect  
NOT Decay

**Treated** = No  
**Untreated** = No  
**Rampant** = No  
**Sealants** = No  
**Urgency** = No

# Working with Schools

# Working with Schools

- Arrive 20-30 minutes early
- Check in at office – introduce yourself to office staff
  - Have government issued photo ID available (some schools require it)
  - Pick up class rosters
  - Put recess/lunch time on class roster
- Ask where they want you to do the screenings
- **BE FLEXIBLE!!**

# Working with Schools

- Set up screening site with available tables/chairs
- Keep wastebasket away from kids
  - *Do not give them mirrors or gloves*

# Working with Schools

- Bring 10-20 kids at a time
  - I like having an entire classroom at a time
  - Ask teacher to lineup children in alphabetical order
  - Ask teacher to give child their consent form (if appropriate)
- Be quick and respectful of class time
  - *Do not chat with each child – “look & leave”*
- Give teacher (or nurse) referral letters & toothbrushes
  - *DO NOT give to children*
- Dispose of garbage before leaving
- Check out at office and thank staff

# How to Screen a Child

# How to Screen a Child

- Check to make sure child has appropriate permission
- Complete oral health screening
  - **ALWAYS FOLLOW THE SAME PATTERN**
  - Start on tooth #3...
    - Scan upper & lower arch for untreated/treated decay
    - Determine if child has rampant decay
    - Scan permanent molars for sealants
    - Determine treatment urgency
    - Enter screening results
- Complete parent referral letter

# How to Screen a Child

- Child can stand or sit
  - *Faster if child stands*
- Screener can stand or sit
  - I stand or sit/lean on edge of table

Any  
Questions?

# **TRAINING TEST**

**Do these teeth have  
untreated decay?**

**No/Yes**

# #1: Untreated Decay?

## #2: Untreated Decay?

## #3: Untreated Decay?

## #4: Untreated Decay?

## #5: Untreated Decay?

## #6: Untreated Decay?

## #7: Untreated Decay?

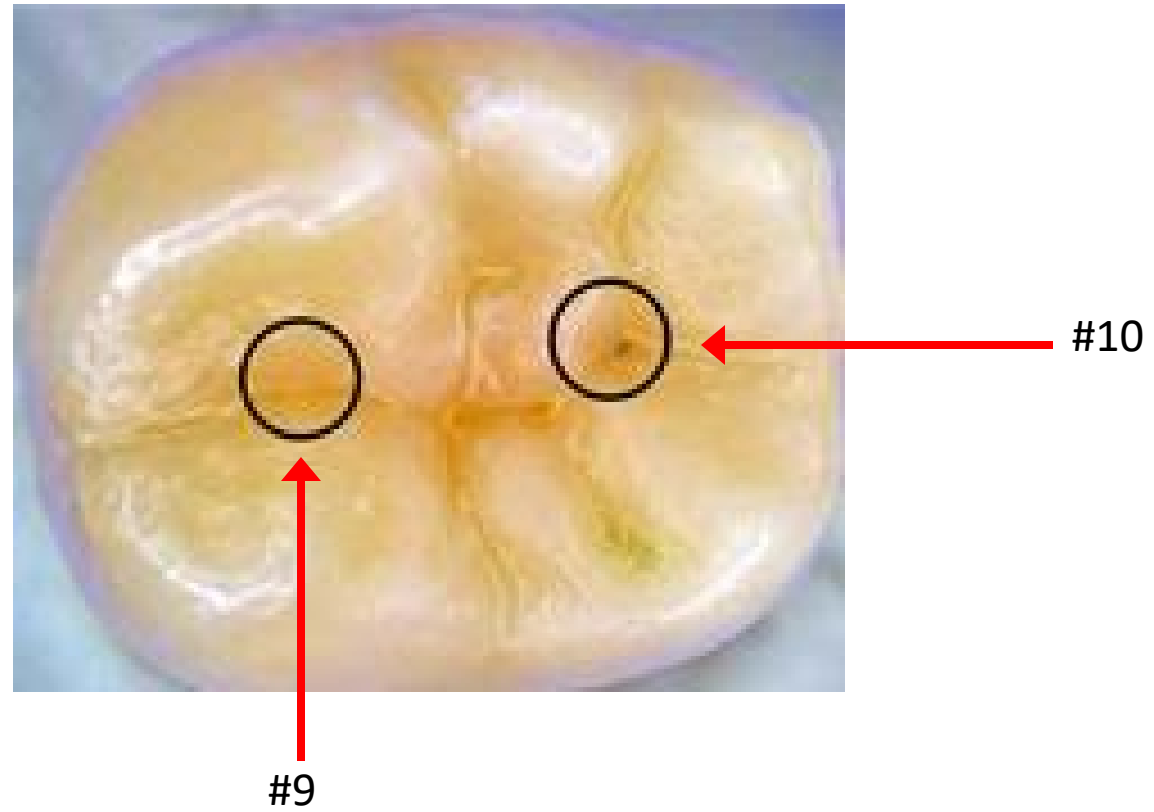

## #8: Untreated Decay?

# #9 & #10: Untreated Decay?

# #11-#14: Untreated Decay?

# #15: Untreated Decay?

# #16: Untreated Decay?

# #17: Untreated Decay?

# #18: Untreated Decay?

# #19: Untreated Decay?

## #20: Untreated Decay?

# Answer Key

- 1: Enamel defect
- 2: Yes
- 3: No
- 4: Yes
- 5: No
- 6: No
- 7: No
- 8: Yes
- 9: No
- 10: No

- 11: No
- 12: No
- 13: No
- 14: Yes
- 15: No
- 16: Yes
- 17: No
- 18: Yes
- 19: No
- 20: No

# 1: Enamel Defect

## 2: Obvious Break in Enamel

### **3: Decalcification but no Break in Enamel**

## 4: Break in Enamel & Shadow

## 5: Fracture Due to Accident - No Decay

## 6: Abscess but No Decay

## 7: No Break in Enamel

## 8: Break in Enamel

# 9 & 10: No Break in Enamel

# These are Tricky - Only 14 is Decay

# 15: Discoloration but No Enamel Break

# 16: Enamel Break & Discoloration

# 17: No Decay

# 18: Enamel Break

# 19: Demineralization But no Enamel Break

## 20: Discoloration But no Enamel Break

# And that's a wrap!

Thank you for participating,  
and I wish you luck in your  
upcoming oral health survey!
